Explore NetZeroPlanner ! 2.0

What's new?

Based on feedback from cities, we are excited to announce the launch of **NetZeroPlanner Version 2** which will provide substantial improvements to both the user experience and accuracy of the climate planning, monitoring / evaluation / learning, and implementation management capabilities of the system.

Taking advantage of these upgrades is simple. There is nothing to download, and you will notice these improvements the next time you log into the system.

Here are the main updates in this V2 release:

- **Easier and more intuitive systems access** and plan creation to make it easier for new cities to start using the system;
- **Automatic city setup in the NZC Portal for new Mission-minded cities** so they can easily access and quickly start using NetZeroPlanner;
- **Reduction in the number of required baseline data inputs** by a third to improve ease of climate plan creation;
- **Additional learning prompts** inside the system to bring more transparency to model methodology;
- **Additional popup error messaging** to improve city data input accuracy;
- **Improvements to Progress Tracker graphs** for more intuitive drill-down to support ongoing learning and better climate plan implementation;
- Improvements to the graphs in Progress Tracker for **more accurate estimation of Key Performance Indicators** where city data is unavailable;
- **Ability to create templates of current plans** including historical data as the foundation for the development of new scenarios and Climate City Contract Iteration;
- **Automatic sandbox access for all NZC Portal users** without compromising city account privacy and security;
- Various bug fixes.

Access to NeZeroPlanner and additional information about the tool is available on the **NetZeroCities Portal** and in the **NetZeroPlanner Portal Group**. Feel free to **contact us** for any questions or support!
