NetZeroPlanner ! 3.0

What's new?

Based on feedback from cities, we are excited to announce the launch of [NetZeroPlanner Version 3](#) which will provide substantial improvements to both the user experience and accuracy of the climate planning, monitoring / evaluation / learning, and implementation management capabilities of the system. Many thanks to all cities for your feedback and suggestions to make NetZeroPlanner an even more helpful tool in support of net-zero achievement.

Taking advantage of these upgrades is simple. There is nothing to download, and you will notice these improvements the next time you log into the system.

Here are the main updates in this V3 release:

- When creating a new plan, the **Comparable City Values** have been updated to reflect additional publicly available data to enhance accuracy and timeliness of calculations. Data for years 2018 - 2024 will provide cities with a more accurate and timely baseline year estimate for new plans. As always, cities will still have the ability to override this Comparable City Value if they have better local data for planning purposes.
- Each NZP data input will have an upper and lower bound with automated error flags to highlight city data input errors and **improve city data input integrity**.
- **Model methodology and detailed calculations** will be visible to cities that want to dig more deeply into the methodology of the model.
- **Model financial assumptions have been updated** to bring them up to date (through year 2025). This includes updated values for the monetization of co-benefits. Documentation of the financial methodology is available on the [NetZeroPlanner portal group](#) page.

Various usability improvements include:

- The ability for cities to delete a plan
- The ability for cities to designate a plan as "view-only" to mitigate the risk that cities might accidentally alter their original CCC plans (all CCC plans are now set to "view only" by default)
- Addition of Business-as-Usual line to all drill-down graphs in Progress Tracker to allow cities to better see progress over time
- Various bug fixes

Access to NeZeroPlanner and additional information about the tool is available on the [NetZeroCities Portal](#) and in the [NetZeroPlanner Portal Group](#). Feel free to [contact us](#) for any questions or support!
